Summary

I am an academic public health physician and Professor of Global Public Health at the University of Glasgow. My research focuses on the epidemiology and control of infectious diseases—particularly HIV and tuberculosis—across resource-limited settings. I hold a prestigious NIHR Global Health Research Professorship and lead a Wellcome Discovery Award-funded programme advancing novel methods for TB surveillance and prevention. I additionally lead several large international research programmes that advance diagnostics, surveillance, and prevention strategies for TB and HIV, supported by over £19 million in personal research funding. I regularly advise WHO and UNAIDS, and my work has directly shaped international guidelines and national policies to improve health outcomes in high-burden settings.
